SUMMARY

Computer Science student specializing in AI and multi-agent systems. Experienced in building LLM-based applications using LangGraph and evaluating them with modern frameworks. Focused on building scalable AI systems, agent orchestration, and real-world deployment.

WORK EXPERIENCE

Promake AI - AI Developer (Part-Time)

Sep 2025 – Dec 2025

- Designed and implemented a multi-agent LLM system for automated website generation using **LangGraph**
- Built agent orchestration pipelines with tool integration and dynamic routing
- Developed scalable prompt workflows for structured website creation

SESTEK - AI R&D Intern

Jun 2025 – Aug 2025

- Built and evaluated LLM-based multi-agent systems using LangGraph and DeepEval
- Implemented agent-based pipelines with open-source LLM tools (Ollama, Groq)
- Conducted evaluation experiments to measure agent performance and reliability

PROJECTS

InfoGuide – RAG-Based AI Information Retrieval System (Graduation Project)

- Designed and implemented an end-to-end **Retrieval-Augmented Generation (RAG)** system for financial knowledge retrieval
- Built a full pipeline including document ingestion, preprocessing, embedding generation, and vector indexing (FAISS / ANN)
- Integrated LLM-based answer generation with retrieved context to ensure grounded and traceable outputs
- Developed evaluation pipeline using retrieval metrics (Recall@k) and qualitative assessment of generated responses
- Implemented scalable workload execution and benchmarking using HPC infrastructure (SLURM, GPU parallelization)

AI Super Resolution Model (PyTorch) - EE417

- Developed a deep learning model to enhance low-resolution images
- Implemented training pipeline using **PyTorch** and image datasets
- Improved image quality using neural network-based upscaling techniques

Hospital Appointment Application (Android) - CS310

- Developed a mobile application for hospital appointment scheduling
- Built backend services using **Java and Spring Boot**
- Implemented user interaction, scheduling logic, and data handling
- Applied **OOP** principles and teamwork in development process

EDUCATION

Sabancı University - Bachelor of Science in Computer Science

Sep 2021 – June 2026

- Full Scholarship
- Core coursework: Object-Oriented Programming, Data Structures & Algorithms, Systems Programming (C++), Machine Learning & AI

Sirri Yırcalı Anatolian High School

- One year of extra English - German classes

CERTIFICATIONS

- AI Professional Development Program — Social Office / TNC Group, 2026

TECHNICAL SKILLS

Languages

C++, Python, C#, Verilog, Java

AI / ML

PyTorch, LangChain, LangGraph, DeepEval, Scikit-learn

Tools & Technologies

Git, Docker, Ollama, OpenAI API, Spring Boot
